Wheeler's "PARK CITY" LAWN GRASS SEED

The Formation of Velvety Lawns

The main point in having a beautiful lawn is to start right. In the first place, see that the ground is thoroughly drained and well prepared with 6 to 12 inches of good soil for the top dressing. The best soil is a good medium texture, neither very heavy nor excessively light. Have all roots, loose stones and lumps of earth removed, and the surface raked down perfectly smooth previous to sowing. Early Spring or Fall is the best time to sow the seed. When the soil is in the proper condition, level, and suitable moist, sow our seeds at the rate of 3 to 4 bushels (48 to 64 lbs.) per acre, after which rake lightly and give a thorough rolling. One pound of seed will sow a plot of about 200 square feet. When the grass has become sufficiently established it should be frequently cut. The oftener this is done the finer and softer the grass will be.

The Best Mixture in the Market

We believe that our **Lawn Grass Seed is one of the best mixtures in the market.** It was carefully selected, has been all recleaned, and we therefore offer it to the public with the fullest confidence in its superior quality. We sell it by the pound instead of by the quart (or measure). By this method of exchange the seed costs the purchaser less than when bought by measure.

We have taken great pains in the preparation of our Lawn Grass Seed, and believe we have succeeded in producing a combination which will grow and establish a fine lawn under all conditions except that of utter neglect. The different varieties of grass ripen at different times of the year, and in order to have a perfect lawn, it is necessary to so combine the kinds that, as one ripens and dies, another is ready to take its place without making any difference in the appearance of the lawn. **OUR BEST MIXTURE** is made up in exactly the correct proportion to produce the most satisfactory results, and we cheerfully recommend it to all who desire a first-class lawn.

MARIGOLD, DWARF FRENCH DOUBLE "HARMONY"

The crown of the flowers measure $2\frac{1}{2}$ inches across. Plants grow 2 feet tall. They are free flowering and bloom all Summer.

Packet 25c.

MARIGOLD "GIGANTEA" SUNSET GIANTS

One of the Outstanding Introductions for 1937

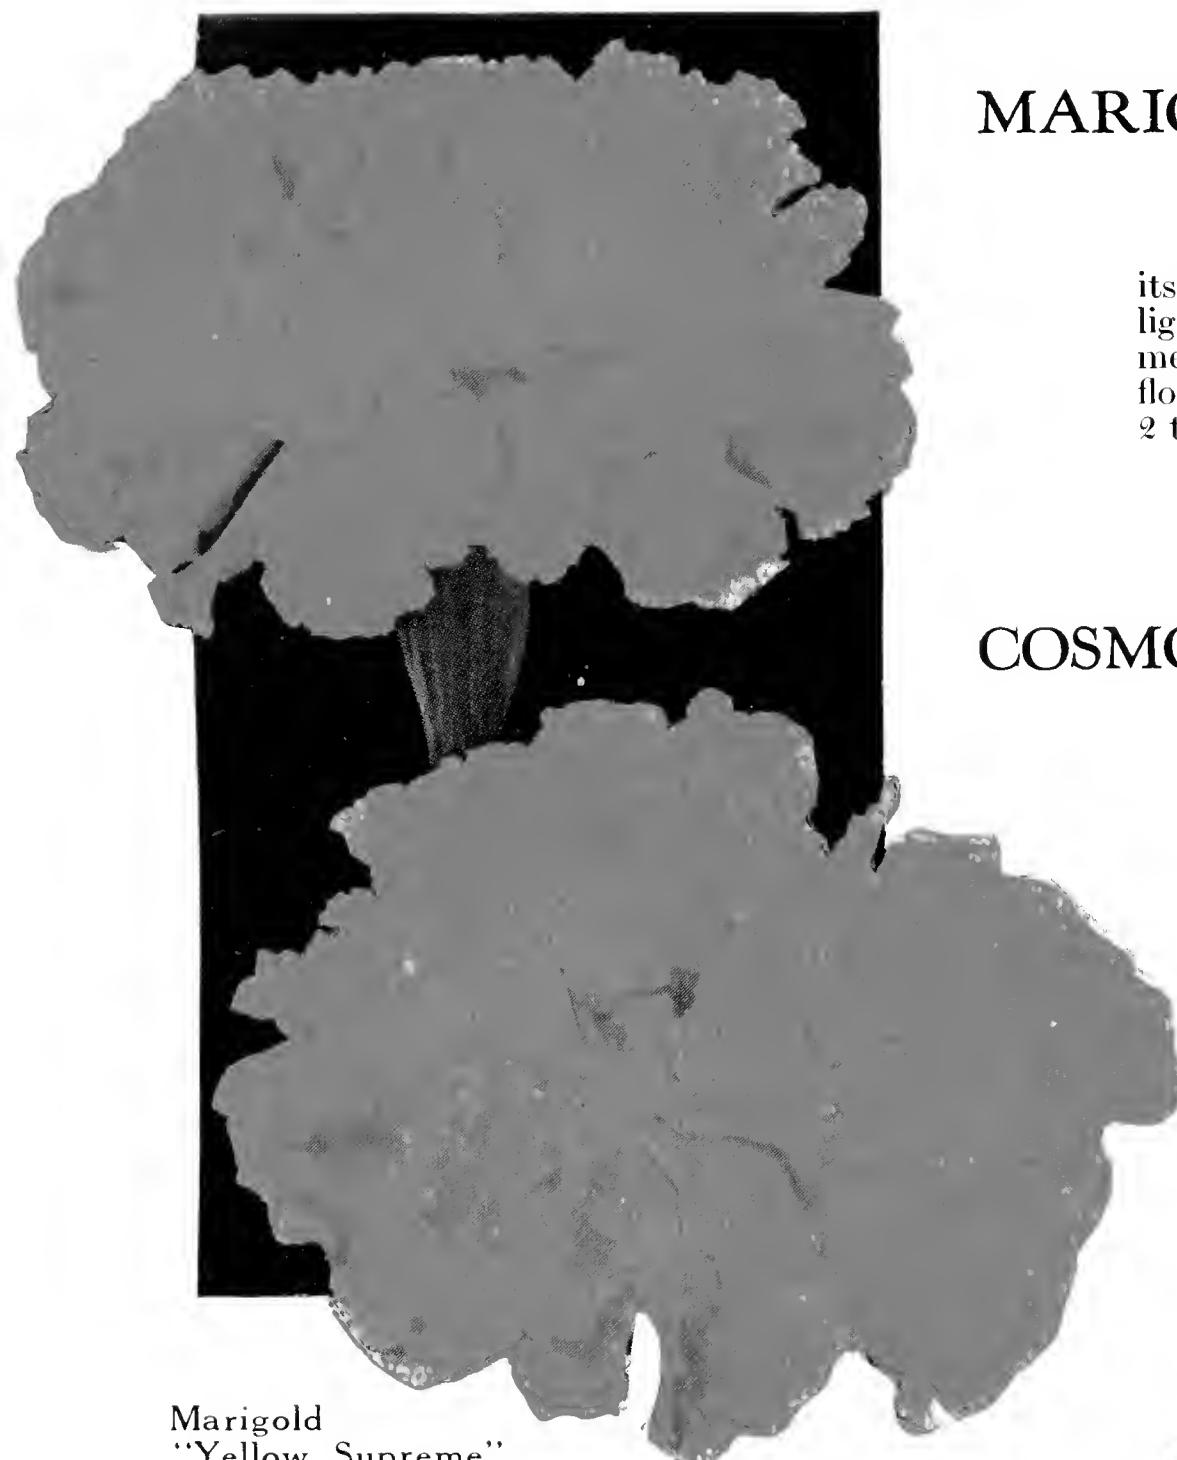

Marigold Sunset Giants is the most amazing new Marigold of the century. It meets all requirements of a good garden flower; it is very showy, it is sweet-scented and large flowers measuring from 5 to 7 inches in diameter, rather loosely formed, and composed of dozens of broad, heavy petals which overlap gracefully to make a flower of great depth and even larger than Dahlia-flowered Zinnias. **Sunset Giants** is a mixture containing vivid shades of orange, deep and light yellow and primrose; about 35% of the plants will come single, but the excellence of the true doubles more than compensates for this percentage of singles.
